What ONI is

ONI is a 1v1 pixel-art fighting game in the browser, where players fight for a shared pot or for free. It mixes a classic fighter (Street Fighter-style rounds, specials, supers) with a social village, tournaments and cosmetics.

The loop: pick a fighter, fight 1v1 (free practice or a small stake), climb the season ranking, enter TENKA cups, and show off your look in the village. Every fighter has the same strength: what you buy changes how you look, never how you fight.

Features

Everything below can be tried in the free demo today, on desktop and phone. No real money moves in the demo, and the notes in each row say what is not live yet.

Feature	What it is
Fighters	7 fighters + Enma, all in HD pixel art, each with a special move and a super. Same strength for all.
1v1 matches	Free practice vs the CPU (Very easy to Hard), or online matches with an equal stake from both players. Stakes are in SOL (demo only for now).
TENKA tournaments	5 cups from a free weekly cup to the $175 Tenno Cup. In the demo, cup lobbies fill with simulated opponents. A monthly Grand Tournament (160 players, top 20 paid) is planned; registration is not open yet.
Enma, the boss	Free tries for practice, or $1 tries that fill his jar (demo, no money moves). Beat him on a $1 try and the jar is yours. He gets harder every time anyone wins.
The village	A shared open space where players walk, emote, challenge each other and enter every mode through its building.
Market	Fighters, avatars, skins, weapon skins, pets, K.O. finishers, emotes, frames and bundles. Cosmetics can be paid in SOL, or in $ONI for 20% off.
Trade	Players resell limited items to each other. The demo shows sample listings.
Clans	Emblems, a monthly Clan War and season ranking. Planned prizes: 500K $ONI for the top 3 clans (250K, 150K, 100K), paid from launch.
Progress	Levels and XP, 3 daily missions with a daily-sweep chest and streak, reward chests with published odds, achievements, 5 tournament medals.
Seasons	Season ranking; prizes and Mythic skins for the top 50 are planned from launch.

Business model

This is the planned model: real payments are not live yet (see Status). ONI will earn from a small fee on every paid match and tournament, and from cosmetics. Stakes, cup entries, Enma tries and prizes are paid in SOL; amounts are shown in USD and converted when you pay. $ONI is used for cosmetics. The game never takes a side in a match: players fight each other, and ONI takes a cut of the pot. Part of every fee goes back to players through rank rewards and the Curse Cauldron.

Revenue stream	Fee and where it goes	Example
1v1 match fee	5% of the pot: 3.5% to ONI, 1% to rank rewards, 0.5% to the Curse Cauldron (blue pot). Silver, Jade and Gold $ONI holders pay 4%, 3.5% and 3%.	Two players stake $10 each: winner gets $19, ONI keeps $0.70
Tournament fee	10% of all entries: 5% to ONI, 3% to rank rewards, 2% to the Curse Cauldron (blue pot)	Tenno Cup, 16 x $175 = $2,800: ONI keeps $140
Grand Tournament	10% of entries, same split	160 x $20 = $3,200: $2,880 in prizes, $160 to ONI
Enma's jar	10% of every $1 try	1,000 tries = $100 to ONI, $900 in the jar
Cosmetics	Fighters $20 / $89 / $200, avatars $5 to $15, skins, pets, bundles	100 Rare fighters = $2,000
Trade fee	2.5% from the buyer + 2.5% from the seller, paid in $ONI, all of it to advertising	A $40 item = $2 of $ONI to the ad budget

The $ONI token ties it together: holding $ONI lowers match fees, opens the bigger cups, gives 20% off in the market, and trade fees are paid in $ONI. That creates steady demand from active players rather than from speculation.

Holding $ONI. Free, $1 and $3 matches need no $ONI. To play for more than $3, a player must hold at least $30 of $ONI. Bigger holdings lower the match fee and open the bigger cups.

Tier	Hold in $ONI	Match fee	What it gives
Bronze	$30	5%	Stakes above $3, +5% airdrop points
Silver	$100	4%	Daimyo and Shogun Cup access, Battle Pass included
Jade	$500	3.5%	Daimyo and Shogun Cup access, Battle Pass included, +10% airdrop points
Gold	$1,000	3%	Tenno Cup access, Battle Pass included, gold name in the village

Battle Pass. Every holder from Silver ($100) up gets the season Battle Pass automatically, as long as they hold. The Battle Pass is planned for after launch; everyone else will be able to buy it.

Paying with $ONI. Every market item costs 20% less when paid in $ONI. A Rare fighter is $16 instead of $20, an Epic $71.20 instead of $89, a Legendary $160 instead of $200. The same 20% applies to avatars, skins, pets, finishers, emotes, frames and bundles.

Before real money goes live: paid matches, the $1 boss tries and the trade market need a legal review per country (skill-based gaming rules, age checks, KYC where required).

Status and roadmap

Where things stand today, plainly:

- **Game:** fully playable as a free demo. No real money moves.
- **Wallet:** "Connect wallet" creates a demo address. Real wallet login is on the roadmap.
- **Escrow:** a Solana program for SOL stakes is written as an **unaudited preview**. It is not deployed, and nothing in the game calls it yet.
- **Game server:** built and ready to deploy, with online play, match verification (it replays every staked match to confirm the winner) and region checks.
- **Payments:** on the roadmap. They go live only after the escrow is tested on devnet, connected to the game, and audited.

1. **Next:** escrow on devnet, real wallet login, the site live at theonicurse.xyz.
2. **Before real money:** an audit of the escrow and the server, legal review, then payments go live.
3. **Launch (Q1):** 7 fighters + Enma, village, TENKA, market, clans, a 2-month video campaign (2 videos a day).
4. **After launch:** a new fighter every 2 to 4 weeks (8 planned), Clan Wars 3v3 and 5v5, God tier fighters.
5. **Q2, the next era (working name "Dragon Age"):** the open-world part of the game, if launch goes well.

Try it: ask for the demo link. It runs in any browser, on desktop or phone, with nothing to install.
